

## You may be invited to take part in a research study.

This study hopes to understand how low-income African American caregivers of children with ADHD make decisions about medications.

Taking part in this study may help healthcare professionals better meet the needs of African American children who have been diagnosed with ADHD and their caregivers in the future.

- Are you an African American/Black adult (18 or older) caregiver of a child, age 6-17, who has been diagnosed with Attention-Deficit/Hyperactivity Disorder (ADHD)?
- Has this child been given a prescription for a medication to treat ADHD in the last year?
- Do you help to make decisions about this child's medications?
- Is this child on Medicaid or uninsured?
- You may be able to participate in a research study being done by:
  - Principal Investigator: Catherine Dingley, PhD, RN, FNP, FAAN, Professor at the UNLV School of Nursing
  - Amy Glasofer- A Virtua nurse and PhD student at the UNLV School of Nursing
  - This study is being supervised by UNLV
- **If you are selected to complete a survey and an interview (in person or by phone), you will be compensated for your time**
