

PMTea Flex Study

We invite children ages 7 - 12 and their caregivers to participate in our study to examine the effects of a behavioral treatment delivered via the web-based video conference platform Zoom. If your child has ADHD as a primary diagnosis, he or she may qualify to participate.

Study Description: Children and caregivers who qualify will participate in a behavior treatment study for ADHD via telehealth.

- One initial consent meeting via Zoom meetings caregiver and child for screening, completing measures, and treatment planning.
- Ten intervention sessions delivered weekly through the Zoom platform to caregivers.

Eligibility:

- Caregiver of child aged 7 – 12 living in Texas.
- Child has a primary diagnosis of ADHD.
- Child has normal intellectual functioning.
- Child has no primary mood disorders or trauma.
- No current parental divorce/custody proceedings.
- Access to internet and web camera capabilities through phone or computer.

Incentives/Benefits:

- FREE behavioral intervention via Zoom!
- \$15 Walmart e-gift card for completion of pre-, post-, and follow up treatment assessments (\$45 total per family).
- Contribution to the development of an accessible treatment for caregivers of children with ADHD.
