Parents of Teens with ADHD

Join our Clinical Trial of Brain Stimulation for ADHD

What is this study about?

This study is investigating whether magnetic brain stimulation can:

- a) change dysfunctional brain dynamics, and**
- b) subsequently improve ADHD clinical symptoms in teenagers with ADHD**

Our goal is to develop a brain-based treatment for ADHD

Why participate?

- Your child may experience a temporary improvement in ADHD-related symptoms**
- Your child will be compensated for participating in this study**
- Your child may help us develop treatments for teens who have ADHD in the future**

Who may be eligible to participate?

- Teenagers (13-18 years old) who have been diagnosed with ADHD**
- Experience ongoing difficulties with attention or memory**
- English speaking**
- Without medical conditions contraindicated for brain stimulation**
- Able to attend 24 study visits that involve brain imaging, brain stimulation, and cognitive tasks**

If interested, take a picture of the QR code on your smart phone and share your contact information so we can tell you more about the study!
