'Qualtrics'

Women with and without an ADHD diagnosis are invited

This quantitative study seeks to better understand how the timing of an ADHD diagnosis may relate to internalized shame and self-stigma in adult women.

The study includes a comparison group to learn more about shame in women generally!

Eligibility:

- Identify as a woman
- Are between the ages 18 and 50
- Have been diagnosed with ADHD by a qualified professional
- OR Have NOT been diagnosed with ADHD (serving as a comparison group)
- Fluent in English
- Live in the United States
